Dr. C. E. Roberts
56 Wingewarra Street
Dubbo, Australia

Re:--

Dear Doctor Roberts:

In April 1946, age 4 years, was a patient in this hospital. He had a biopsy of a tumor of the right femur and the pathological report was sclerosing osteogenic sarcoma. He was given course of X-ray therapy to control the pain. Soon after his discharge from the hospital he and his mother returned to his home in Australia.

There is a report in the chart stating that the child was under your care for some time before he came to San Francisco. We are most interested in having a complete follow up on all cases of bone tumor and no word regarding him has been received since his return home. I should appreciate it very much if you would write me, giving me any information you may have regarding his progress and treatment and of his present condition. If he is not living we are interested in having the immediate cause and date of death and whether there was an autopsy.

I am inclosing a stamped envelope for your convenience.
Thanking you for your kind cooperation, I am,

Very truly yours,

Elinor P. Wells
